UV Overseas CRM System — Current State, Proposed Upgrade & Requirements

A structured proposal to improve multi-order tracking, role-based access, and real-time sync across all teams

01 — EXECUTIVE SUMMARY

Overview

This document presents a comprehensive review of the UV Overseas Google Sheets-based CRM system currently under development. It describes the existing structure, identifies known limitations — particularly around multi-order client tracking — and proposes a phased upgrade path. A role-based requirements checklist is included to confirm the exact workflow for each team before development continues.

Component	Current Status	Key Gap
Master Hub Sheet	One row per order	Multi-order clients cause data overwrites
CRM Spoke (Main)	One row per client	Cannot track multiple orders per client
Client Sub-Tab	One row per order ✓	Correct — but sync to Hub breaks on order 2+
Client Credit Sheet	Per-client totals ✓	Correct — already multi-order aware
Role-Based Access	Partially implemented	Protection resets remove CRM write access
Payment Tracking	Per order in Hub	Accounts cannot see order-wise history clearly

The proposed upgrade resolves all gaps above without disrupting existing data or workflows.

02 — CURRENT SYSTEM ARCHITECTUR

How Data Flows Today

The current system spans two Google Spreadsheets: the **Master Hub** (Admin) and one or more **CRM Spoke** files (one per CRM executive). Data flows via Google Apps Script triggers that fire on cell edits.

Step	Actor	Action	Sheet Affected
1	Sales / Admin	Assign client — fill Customer Name + CRM Owner	Master Hub
2	Script	Auto-creates row in CRM Spoke Main sheet + client sub-tab	CRM Spoke
3	CRM Executive	Fill order details: PI No, Item Value, Freight, Discount	CRM Sub-Tab
4	Script	Calculates Final Invoice, pushes to Hub + Credit sheet	Hub + Credit
5	Accounts	Enter Payment Received + Payment Date in Hub col J–K	Master Hub
6	Script	Pushes payment back to CRM Spoke Main sheet	CRM Spoke
7	Logistics	Enter AWB No + Dispatch Date in Hub col Q–R	Master Hub
8	Script	Updates Dispatch Status; blocks entry if credit exceeded	Master Hub
9	Script	Refreshes Used Credit + Available Credit in Credit sheet	Client Credit

Current Limitations

- **Single order per client in Hub:** UUID (unique ID) is assigned per client, not per order. When a client places a second order, the Hub row is overwritten instead of a new row being added.
- **CRM Main sheet:** Stores only one row per client. Order 2, 3, 4 have no place to appear — the latest order silently overwrites the previous.
- **No order history view:** There is no single place to see all orders for one client across time.
- **Protection conflicts:** When Admin runs "Repair Protection", CRM script users lose write access to Hub — breaking the sync until manually fixed.
- **Payment visibility:** Accounts can see payments in Hub but cannot view a consolidated per-client payment history across multiple invoices.

03 — PROPOSED UPGRADE ARCHITEC

New Sheet Structure

Sheet	Location	Rows	Purpose	Who Edits
Master Hub (Client Summary)	Admin Hub	One per client	Total invoice, total paid, credit status, latest dispatch	Admin / Sales assigns client
Order Ledger (NEW)	Admin Hub	One per order	Full order history — every PI, invoice, payment, dispatch per client	Script auto-fills; Accounts + Logistics edit
Client Credit	Admin Hub	One per client	Credit limit, used credit, available credit, requests	Sales / Admin sets limit
CRM Main (Client List)	CRM Spoke	One per client	Client summary: total orders, total value, total paid, due balance	Read-only summary
Client Sub-Tab	CRM Spoke	One per order	All order details — source of truth for CRM data entry	CRM Executive

New Data Flow

Step	Actor	Action
1	Sales / Admin	Assign client in Master Hub — creates UUID (per client, permanent)
2	Script	Creates client row in CRM Spoke Main + blank sub-tab
3	CRM Executive	Adds new order row in sub-tab (row 2 = order 1, row 3 = order 2, etc.)
4	Script	Each sub-tab row creates/updates ONE row in Order Ledger with that PI No
5	Script	Master Hub Client Summary recalculates totals from Order Ledger
6	Accounts	Enters payment in Order Ledger against specific invoice number
7	Script	Payment pushes back to CRM sub-tab row; Credit sheet refreshes
8	Logistics	Enters AWB + Dispatch Date in Order Ledger for specific order
9	Script	Updates Dispatch Status in CRM sub-tab; checks credit limit

Order Ledger — Column Structure

Col	Field	Filled By	Description
A	UUID	Script	Links to Master Hub client row
B	Client Name	Script	From Hub — auto-filled
C	CRM Owner	Script	From Hub — auto-filled

D	PI No	CRM Script	From CRM sub-tab col A
E	Invoice No	CRM Script	From CRM sub-tab col B
F	Invoice Date	CRM Script	From CRM sub-tab col C
G	Order Type	CRM Script	Production / Sample
H	Item Value (USD)	CRM Script	From sub-tab
I	Dev Charges	CRM Script	From sub-tab
J	Freight	CRM Script	From sub-tab
K	Discount	CRM Script	From sub-tab
L	Final Invoice Value	Script (formula)	H + I + J - K
M	AWB No	Logistics	Entered in Order Ledger
N	Dispatch Date	Logistics	Entered in Order Ledger
O	Dispatch Status	Script (formula)	Pending / Dispatched
P	Payment Received	Accounts	Entered in Order Ledger
Q	Payment Date	Accounts	Entered in Order Ledger
R	Payment Status	Script (formula)	Pending / Partial / Received
S	Due Balance	Script (formula)	L - P

04 — ROLE-BASED ACCESS MATRIX

Who Can See and Edit What

Role	Master Hub	Order Ledger	Client Credit	CRM Members	Activity Log	CRM Spoke
Admin	Full edit	Full edit	Full edit	Full edit	View only	View only
Sales Manager	View + N/O/P edit	View only	A-C, F-G edit	Add members (no Admin role)	Hidden	View only
Sales	View + N/O/P edit	View only	A-C, F-G edit	Add members (no Admin role)	Hidden	View only
CRM Executive	No access	No access	No access	Hidden	Hidden	Full edit (own file only)
Accounts	J-K edit only	P-Q edit only	View only	Hidden	Hidden	No access
Logistics	Q-R edit only	M-N edit only	View only	Hidden	Hidden	No access

Note: "Hidden" means the sheet tab is not visible. Protection rules still apply as a secondary layer of security.

05 — PHASED IMPLEMENTATION PLAN

Recommended Phases

Phase 1 — Order Ledger (No Breaking Changes)

- Add new "Order Ledger" sheet to Master Hub
- Sub-tab edits push each order row to Order Ledger (PI No as key)
- Existing Hub main sheet and CRM Main sheet unchanged
- Accounts and Logistics begin using Order Ledger for payment/dispatch
- All existing data migrated automatically on first run

Phase 2 — Hub Client Summary

- Convert Master Hub main to one-row-per-client summary
- Totals (Invoice Value, Paid, Due) pulled from Order Ledger by script
- UUID becomes truly per-client — permanent and never reused
- CRM Main sheet converted to client summary with order count + totals
- Credit sheet continues working unchanged

Phase 3 — Enhanced UX

- Order status colour coding in sub-tab (Green=Paid, Yellow=Dispatched, Red=Overdue)
- Payment reminder emails per overdue order (not just per client)
- CRM sub-tab shows running total row at the bottom
- Order Ledger filterable by CRM Owner, date range, payment status
- PDF export per client showing all orders and payment history

06 — REQUIREMENTS CHECKLIST (PLE

Instructions

Please review each question with the relevant team member and mark Yes or No. Add any notes in the Notes column. Your answers will determine the final implementation. Return this completed document to Manish Kumawat at work.mannnish@gmail.com.

Admin & Sales — Client Assignment

No.	Question	Yes	No	Notes
1	Does Admin always assign a client to a CRM executive before the CRM can enter any order?	■	■	
2	Can one client be assigned to multiple CRM executives simultaneously?	■	■	
3	When a client is reassigned to a different CRM, should their order history transfer?	■	■	
4	Should Sales Manager be able to assign clients, or only Admin?	■	■	
5	Do you need a "client status" field (e.g. Active / Inactive / On Hold)?	■	■	
6	Should there be a maximum number of orders per client before approval is required?	■	■	
7	Do you want automatic email to CRM when a new client is assigned to them?	■	■	

CRM Executive — Order Entry

No.	Question	Yes	No	Notes
1	Can one client have multiple active orders at the same time?	■	■	
2	Is PI No always unique per order, or can the same PI No appear for different clients?	■	■	
3	Does the CRM enter the Invoice Number, or is it auto-generated by the system?	■	■	
4	Should the CRM be able to edit an order after it has been dispatched?	■	■	
5	Should the CRM be able to delete an order row from the sub-tab?	■	■	
6	Does the CRM need to see payment status (Paid / Pending) for each order in their sub-tab?	■	■	
7	Should the sub-tab show a running total row at the bottom (sum of all orders)?	■	■	
8	Does the CRM ever handle more than one currency (e.g. USD and INR in the same file)?	■	■	

9	Should the CRM receive an email notification when Accounts marks an order as Paid?	■	■	
10	Should the CRM receive an email notification when Logistics dispatches an order?	■	■	

Accounts — Payment Tracking

No.	Question	Yes	No	Notes
1	Does Accounts enter one payment per order, or can a single payment cover multiple invoices?	■	■	
2	Can a client make a partial payment (e.g. pay 50% of invoice value)?	■	■	
3	If partial payment, should the system automatically recalculate the due balance?	■	■	
4	Does Accounts need to see all orders for a client on one screen to enter payments?	■	■	
5	Should Accounts be able to see the Client Credit limit while entering payment?	■	■	
6	Do you need a "Payment Reference Number" or bank transaction ID field?	■	■	
7	Should the system send an automatic overdue reminder if payment is not received by Due Date?	■	■	
8	Who should receive the payment received notification — Admin only, or also Sales and CRM?	■	■	

Logistics — Dispatch

No.	Question	Yes	No	Notes
1	Does Logistics need to see all pending-dispatch orders across all clients on one screen?	■	■	
2	Can one shipment (one AWB No) contain items from multiple orders/invoices?	■	■	
3	Should Logistics be blocked from entering dispatch details if credit is exceeded (col N = Yes)?	■	■	
4	Do you need a separate "Dispatch Remarks" column for Logistics notes?	■	■	
5	Should the Dispatch Date auto-fill today's date when AWB No is entered?	■	■	
6	Does Logistics need to see the Invoice Value before dispatching?	■	■	
7	Should the system notify the client (external email) when dispatch is done?	■	■	

General System Requirements

No.	Question	Yes	No	Notes
1	Should activity logs be visible to Admin only, or also to Sales Manager?	■	■	
2	Do you need a way to export a single client's full order and payment history as PDF?	■	■	
3	Should the system support multiple CRM Spoke files (one per CRM executive)?	■	■	
4	Is there a requirement to archive old/completed orders rather than delete them?	■	■	
5	Do you need role-based email notifications (different people get different alerts)?	■	■	
6	Should credit limits be set in USD, INR, or both?	■	■	
7	Do you want a dashboard summary page in the Hub (charts, totals, overdue count)?	■	■	
8	Should the system work on mobile (Google Sheets mobile app)?	■	■	

07 — NEXT STEPS

Action Plan

#	Action	Owner	Target
1	Review this document with all team leads	Client / UV Overseas	This week
2	Complete the Requirements Checklist (Section 06)	All role representatives	This week
3	Return completed checklist to Manish Kumawat	Client POC	This week
4	Confirm Phase 1 scope and begin Order Ledger development	Manish Kumawat	Next week
5	Phase 1 testing with live data in staging Hub	Client + Developer	Week 2
6	Phase 1 go-live and monitoring	All teams	Week 3
7	Phase 2 planning based on Phase 1 feedback	Manish Kumawat	Week 3-4
